About to scan? Check where it goes.

A QR code on a sign or sticker can take you to a fake website.

1 **Look for a sticker on top.**
If the code looks covered or altered, skip it.

2 **Check the address first.**
Look at the link your phone shows before you open it.

3 **Asked to log in or pay?**
Open the official app or website yourself.

A QR code is just a link. Check where it leads.
